Control through operators for quantum chemistry

We consider the problem of operator identification in quantum control. The free Hamiltonian and the dipole moment are searched such that a given target state is reached at a given time. A local existence result is obtained. As a by-product, our work reveals necessary conditions on the laser field to make the identification feasible. In the last part of this work, some algorithms are proposed to compute effectively these operators.

Ort: Raum 30.02.003 (2. Stock) (Mathegeb. 30 West) Zeit: Freitag, 25.05.2012, um 16.15 Uhr

Zu diesem Vortrag laden wir Sie herzlich ein.
